Bifidobacterium adolescentis Probiotic

The Key Strain for Metabolic & Neuro-Endocrine Balance in Adulthood

Product Overview

Bifidobacterium adolescentis is a pivotal abundant strain in its healthy gut, playing a critical role in maintaining metabolic homeostasis and supporting the gut-brain axis. A dominant species during adolescence, and this strain modulates energy metabolism, inflammatory pathways, and neuro-endocrine communication. We supply high-purity, **Bifidobacterium adolescentis** strain, backed by scientific evidence. We support a gut health in a substantial and effective potency of 50 Billion CFU.

Technical Advantages

Metabolic Homeostasis Regulation: Possesses a specialized energy cells for fully metabolizing a broad spectrum of HMOs, making it the premier gut colonizer.

Gut-Brain Axis Communication: Demonstrates the gut-brain axis, suggesting a role like CRP for balanced intricate immune and neural pathways.

Effective 100B CFU Formulation: Strategically chosen to modulate inflammation and support gut ecology without, over-look over formulation.

Bone Health Support Potential: Helps create gut environment; mineral absorption, particularly calcium is crucial for lifelong skeletal.

Immunomodulatory Properties: Helps in balanced immune anti-inflammatory cytokine promoting gut barrier, mainly in low-grade inflammation.

Application Scenarios

Metabolic Health Supplements: fortifying blood sugar meters

Stress & Cognitive Support Formulas: for nootropic, and heart.

Adult Microbiome Replenishment: Age-appropriate microbiota.

Bone & Women's Health Products: for bone-bone structure.
